How PCIRC Works: Secrets From Behind the Scenes

Anita Cook

Webinar

July 18, 2014

What I plan to cover in today's Webinar on PCIRC

- Flow of information between systems
- How SearchOhio works
- How Pickup Anywhere works
- How Visiting Patron works
- Policies and parameters
- Lots of time for questions

How Does PCIRC Work Behind the Scenes?

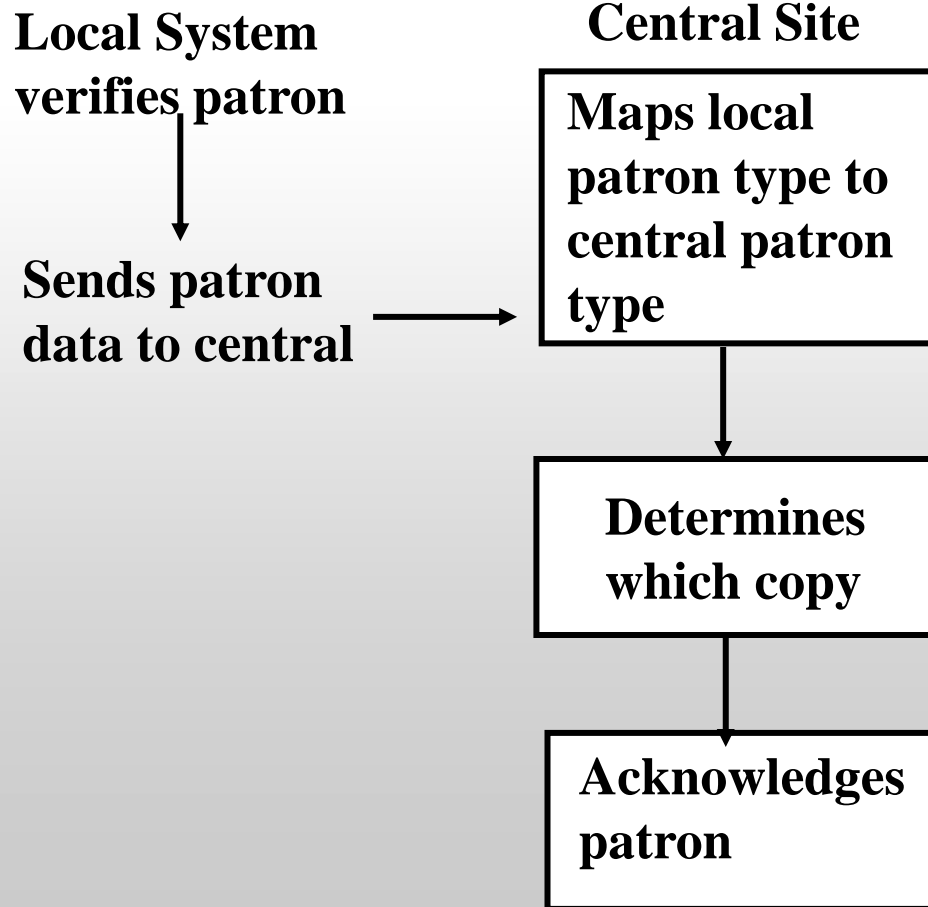

**Patron requests
item on central
catalog**

**System determines
availability of item**

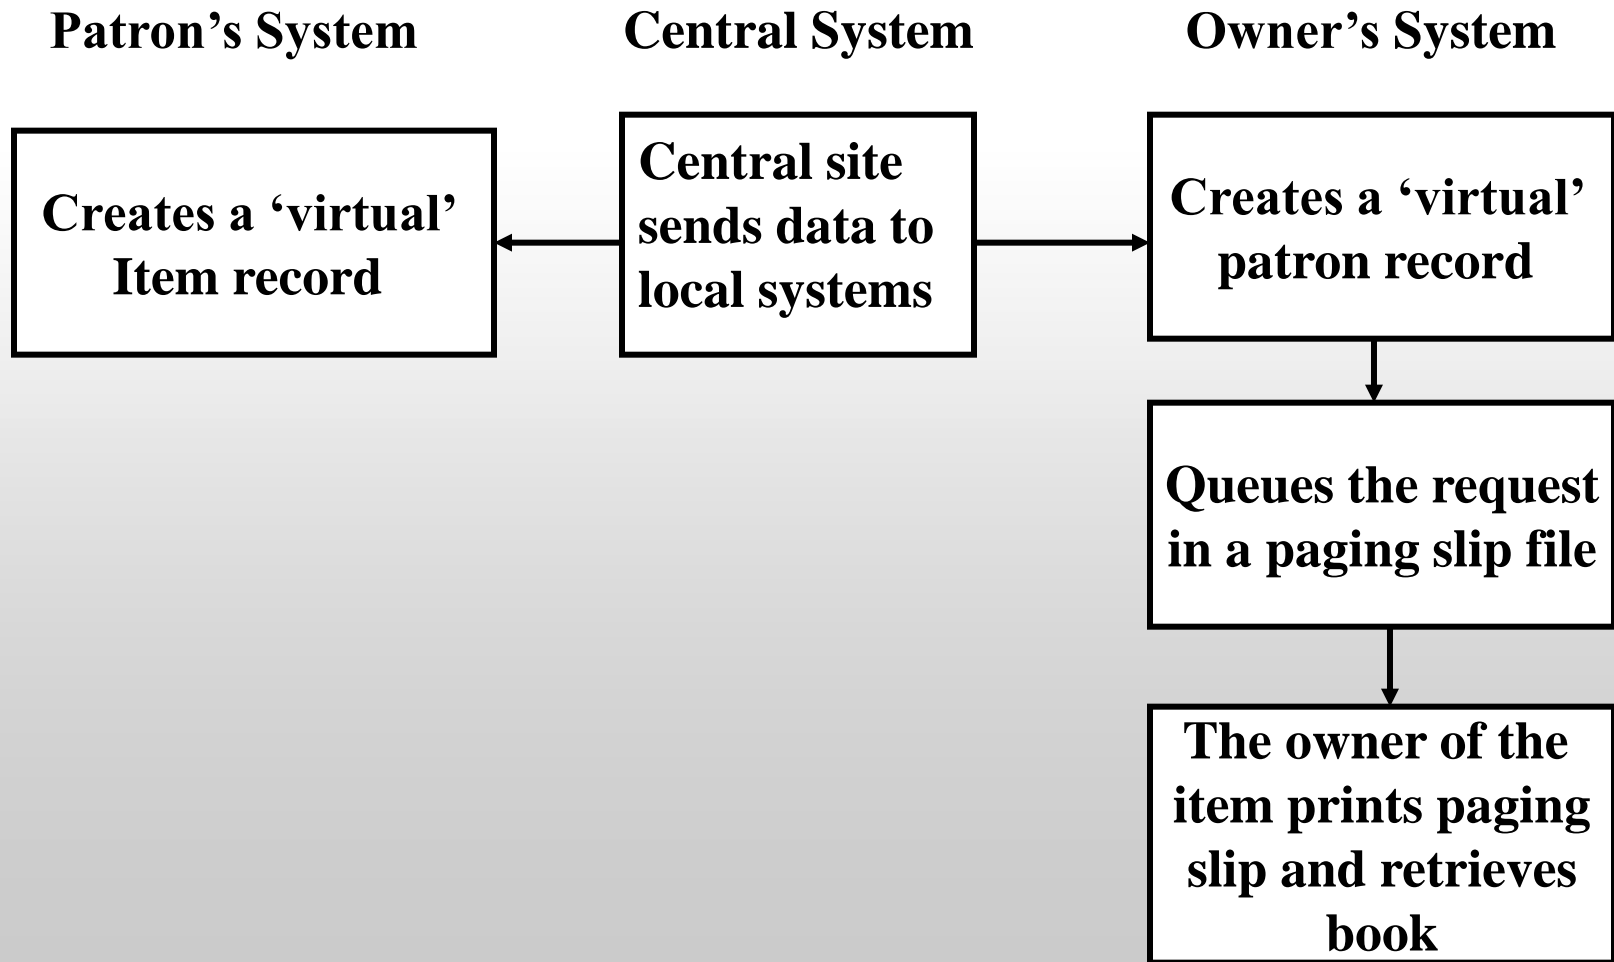

**Verifies patron
Against home
Library database**

What Happens Next?

Behind the Scenes...

Getting the Item to the Patron

Patron's System

**Receive item
notify patron**

**Check out to
patron**

**Check in from
patron**

**Return item to
owning system**

Owner's System

**Check out to
patron's system
and send item**

Check in

Things to Remember About PCIRC

- All circulation transactions between systems flows through the Central Catalog.
- The Central Catalog acts like a traffic cop, sending transactions to/from the patron's library and to/from the lending library
- Each institution is assigned a priority that determines whether they are chosen for the request

How does PCIRC work with SearchOhio?

- PCIRC works much the same with SearchOhio requests
EXCEPT:
 - When your patron is requesting on the SearchOhio catalog your Innovative system is talking to SearchOhio's central catalog and not OhioLINK
 - When a SearchOhio patron is requesting from OhioLINK, their Innovative system is talking to the OhioLINK central catalog

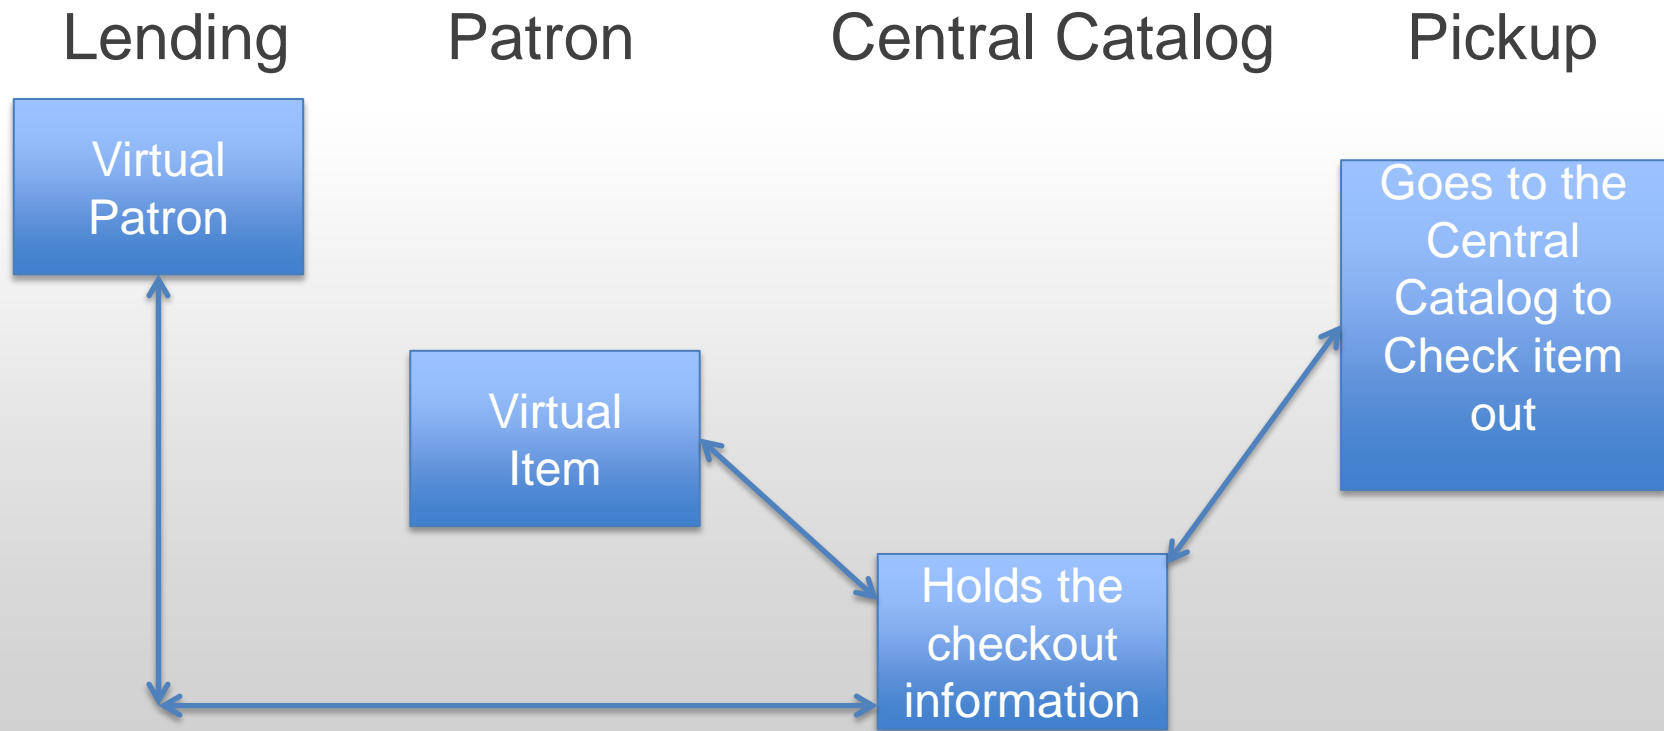

How does Pickup Anywhere Work?

- Pickup Anywhere works a little differently
- There are four sites involved with Pickup Anywhere
 - The patron's home library
 - The lending library
 - The pickup location
 - The Central Catalog
- No transaction information is stored at the Pickup Location
- It still stored at the patron's library, at the lending library, and on the Central Catalog

How does Pickup Anywhere work?

How does Visiting Patron Work?

- Visiting patron works much the same as regular PCIRC except you skip the “requesting” phase.
- When a patron comes to another OhioLINK library with a book to check out:
 - Use their patron ID to look them up in their home system
 - Creates a virtual patron record in the lender’s system
 - Check the book out using the OhioLINK patron loan rule
 - Creates a virtual item record in the patron’s system

Policies and Parameters

- What comes into play to determine a loan rule for an OhioLINK request?
 - Five character codes assigned to each Innovative system or agency
 - Patron types
 - Item types
 - Status
- Intercampus Services Committee recommends all policies

Five Character Codes

- Each Innovative system in OhioLINK has a five character code assigned to it
 - Examples:
 - os4ug Ohio State University
 - cl3tg Clark State Community College
 - fi1ug University of Findlay
 - cc2pl Cuyahoga County Public Library
- Each library in the two consortia (OPAL and Consort) also have 5 character codes (Agencies)
- https://www.ohiolink.edu/content/ohiolink_institutional_codes

Things to Remember About the 5 Character Code

- 5 Character Codes are what all parameters are based on
 - This means parameters can only be changed at the institution level, not at the branch level
 - Turn PCIRC off for a location
 - Setting priority in the priority table
 - Loan rules

Patron Types

- All locally defined Patron Types (ptype) must be mapped to one of the Central ptypes
- https://www.ohiolink.edu/content/appendix_a1a
- So if you add or change a ptype locally, you must notify the OhioLINK office to re-map it centrally.

Item Types

- Each locally defined Item Type (itype) needs to be mapped to a centrally defined itype
- https://www.ohiolink.edu/content/appendix_a2a
- If you add or change an itype locally, you need to inform the OhioLINK office to re-map the central itype

Rules of thumb for using itypes and ptypes

- The Lending library uses a **Central ptype** with their **local itype** to check the book out to your institution (Institution Loan Rule)
- When you check it out to your patron, you use your **local ptype** and a **Central itype** (Patron Loan Rule)

Statuses

- Important things to remember!
 - Only the symbol transfers to the Central Catalog and not your local meaning
 - Only Centrally defined statuses will display a meaning—if you use a status locally that is not defined centrally, it will only display the symbol on the Central Catalog
 - Only the “-” or AVAILABLE status is allowed to be requested
 - Something can be AVAILABLE but still not be requestable because of the itype map
- https://www.ohiolink.edu/content/appendix_a6

Patron Block Tables

- Used to determine the following
 - Maximum number of requests (holds) a ptype can make
 - Maximum number items a ptype can have checked out before they are blocked from requesting
 - Maximum fine a ptype can have before they are blocked from requesting
 - Whether or not a ptype's expired patron record will block them from requesting
- All ptypes need to be defined in the Patron Block table or you get an error when you try to check an item out
- https://www.ohiolink.edu/content/appendix_a5

Summary

- The software behind PCIRC is complex but it is designed for ease of use for both the patron and the staff member
- Information about the patron and item is exchanged between systems so that no rekeying is necessary and all of the information is available for checking out the material when needed
- Maintenance of the many tables supporting PCIRC is infrequent, but a clear understanding of how these tables support the policies of PCIRC is necessary
- Coordination between the OhioLINK office and the local lead implementors is crucial for maintaining the smooth functioning of PCIRC
- PCIRC contacts should all be on the PCIRC email list
- PCIRC problems can be reported to support@ohiolink.edu
