

8 for All – 9 for “Mine”

The use of 856 & 956 fields:
10-Step process for 856 to 956 conversion
Examples of records for OhioLINK Institutions

Contents

Part 1: Illustration of a 10-step process for conversion

- Graphic model to illustrate:
 - Booleans to be gathered
 - Actions to be performed on records within the Booleans
- Step-by-step procedures

Contents continued

Part 2: Examples of records & displays as they will appear after the change from 856 to 956 is made

- OhioLINK Resource examples
 - Serial, E-book, Database
 - Millennium record, Local view, Central Catalog view
- Member Institution Resource examples
 - Serial, E-book
 - Millennium record, Local view, Central Catalog view
- Multiple Means of Access examples
 - Serial, E-book
 - Millennium record, Local view, Central Catalog view

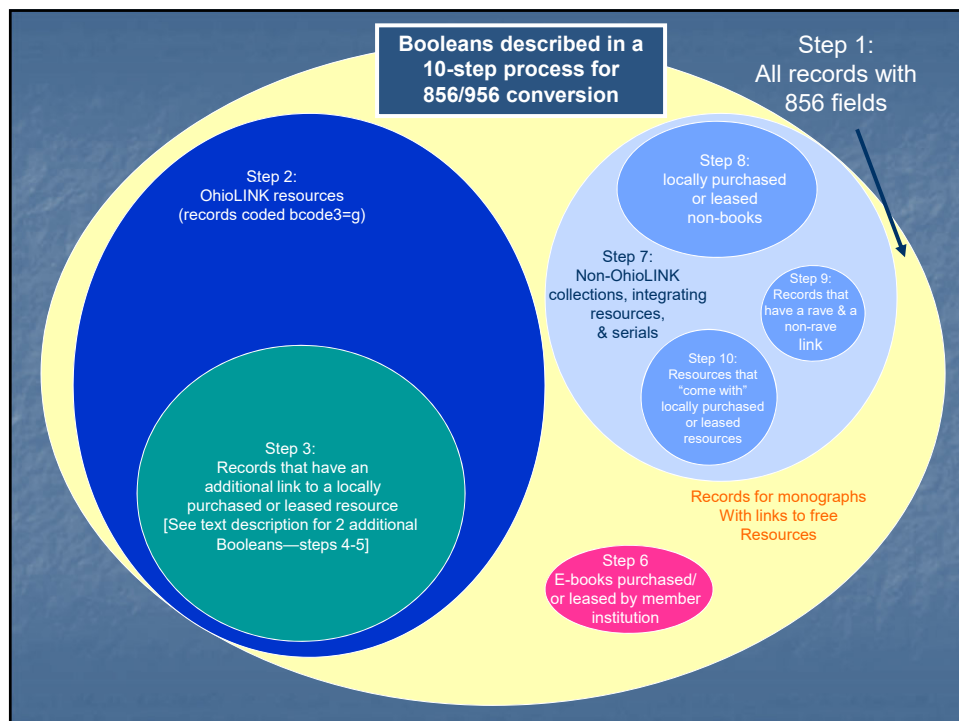

Important note:

- No changes in procedures are needed for resources freely available to anyone and everyone using the Internet

(In other words, continue to use the 856 for urls for freely available Internet resources)

Part 1

Illustration of a 10-step process for conversion

Example of Process – 10 steps

Step-by-step: Step 1

MASTER BOOLEAN

Gather the BASE BOOLEAN:
A set of all records that have links
to Internet resources

Potential Boolean strategy:
Bib records that have an 856 field
Millennium create list: type (b);
field (!) 856; condition (≠);
value (blank)

SAVE results

Caution: For large libraries, this could be a very large set of records. Libraries may wish to put more limits in the strategy. For example, one could eliminate government documents in order to reduce the size of the result set.

Step-by-step: Step 2

Gather a subset of records from the results of the MASTER BOOLEAN
for a set of records that have links to OhioLINK resources

Records representing
OhioLINK
resources

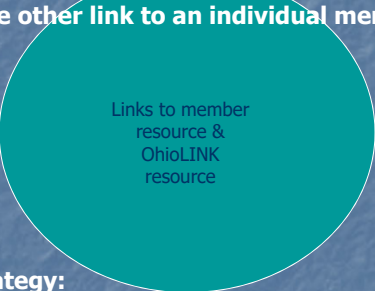

Potential Boolean strategy:
Bibliographic records where BCODE3 = g
Millennium create list: type (b); field (BCODE3); condition (=); value (g)

SAVE results

Change process (resubmit records to Central):
•Change bcode3=g to bcode3=z
•Change bcode3=z to bcode3=-

Step-by-step: Step 3

Gather a subset of records from the results of the Boolean gathered in Step 2 for a set of records that have links to OhioLINK resources and at least one other link to an individual member resource

Links to member resource & OhioLINK resource

Potential Boolean strategy:

Bibliographic records where at least one 856 field does not have "rave"
Millennium create list: type (b); field (!) 856; condition (o); value (rave)

SAVE results

Step-by-step: Step 4

Gather a subset of records from the results of the Boolean gathered in Step 3 for a set of records that have links to OhioLINK resources and at least one other link, but that exclude records for NetLibrary books

Links to One rave & one other, no NetLibrary

Potential Boolean strategy:

Bibliographic records where at least one 856 field does not have "NetLibrary"

Millennium create list: type (b); field (!) 856; condition (o); value (NetLibrary)

SAVE results

Step-by-step: Step 5

Gather a subset of records from the results of the Boolean gathered in Step 4 for a set of records that have links to OhioLINK resources and at least one other link, but that exclude records for NetLibrary and Federal documents

Links to
one rave
& one other,
no NetLib;
no gpo

Potential Boolean strategy:

Bibliographic records where at least one 856 field does not have "gpo"
Millennium create list: type (b); field (!) 856; condition (o); value (gpo)

Change process:

- Review each record manually.
- Change 856 to 956 for locally purchases/leased resources

Step-by-step: Step 6

Gather a subset of records from the results of the MASTER BOOLEAN:
For set of records for e-books that are not OhioLINK resources and
For which the member institution purchases/leases/subscribes

Non-OhioLINK
"paid for"
E-books

Potential Boolean strategy:

Use local practice of coding fields to inform design of a search that breaks out paid resources.

OSU example:

type (b); field (location), condition (=), value (wwb) [to identify e-books] AND
type (b); field (bib lvl), condition (≠), value (s) [to eliminate analytics] AND
type (o); field (eprice), condition (>), value (0) [to identify OSU paid-for e-books]

Change process:

- Globally change all 856s to 956s

Step-by-step: Step 7

Gather a subset of records from the results of the MASTER BOOLEAN:
For set of records for integrating resources, and collections
(that is, for all non-books that are not OhioLINK resources)

Non-OhioLINK
collections, integrating
resources,
& serials

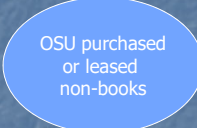

Potential Boolean strategy:

type (b); field (bcode3), condition (\neq), value (g) AND
type (b); field (bib lvl), condition (=), value (i) OR
type (b); field (bib lvl), condition (=), value (s) OR
type (b); field (bib lvl), condition (=), value (c)

SAVE Results

Step-by-step: Step 8

Gather a subset of records from the results of the Boolean gathered
in Step 7 for as set of records for locally purchased/leased
nonbook resources

OSU purchased
or leased
non-books

Potential Boolean strategy:

Use local practice of coding fields to inform design of a
search that breaks out paid resources.

OSU example:

type (o); field (eprice), condition ($>$), value (0) AND
type (b); field (!) 856, condition (A), value (rave.ohio) AND
type (b); field (!) 856, condition (A), value (gpo)

Change process:

- Globally change all 856s to 956s
- Globally change all bcode3=- to bcode3=z
- Globally change all bcode3=z to bcode3=-

Step-by-step: Step 9

Gather a subset of records from the results of the Boolean gathered in step 7 for a set of records for integrating resources, and collections (that is, for all non-books that are not OhioLINK resources)

Records that have a rave & a non-rave link

Potential Boolean strategy:
Use local practice of coding fields to inform design of a search that breaks out paid resources.

OSU example:

```
type (o); field (eprice), condition (>),
value (0) AND
type (b); field (!) 856, condition (A), value
(rave.ohio) AND
type (b); field (!) 856, condition (A), value
(gpo)
```

Change process:

- Globally change all 856s to 956s
- Globally change all bcode3=- to bcode3=z
- Globally change all bcode3=z to bcode3=-

Step-by-step: Step 10

Gather a subset of records from the results of the Boolean gathered in step 7 for a set of records for non-books (print or online) that have links to resources that the member institution has paid for locally

Note: these are "comes with" resources

Resources that "come with" locally purchased or leased resources

Potential Boolean strategy:
Use local practice of coding fields to inform design of a search that breaks out paid resources.

OSU example:

```
type (b); field (bcode3), condition (≠); value (g) [to eliminate OL resources] AND
type (o); field (eprice), condition (=); value (0) [for resources that "appear" to be free] AND
type (o); field (acq type), condition (=); value (c) [to identify records for online journals that are free with print and print journals that are free with online subscription]
```

Change process:

- Globally change all 856s to 956s
- Globally change all bcode3=- to bcode3=z
- Globally change all bcode3=z to bcode3=-

Part 2

Examples of records & displays as they will appear after the 856/956 change is made

Context

Record examples

- Apply to records for electronic resources
- Are designed to aid member institutions' staff in using the 856 and/or the 956 fields in the bibliographic record
- Do not illustrate changes to bcode3.

OhioLINK Resource Serial

- Serial in the EJC
- Bib record coding: BCODE3 = g
- Member institution provides no additional online versions of the serial through this record
- No change to 856 field needed
