**RECOMMENDATION:**

Verification in this recommendation is defined as issue-level verification. Starting with the next title that the depositories are to de-dup, verification will occur at the volume-level:

- all non-unique titles where one print copy exists within the state of Ohio in a depository, or
- where an OCLC search reveals two print copies are available nationwide.

If the title is unique within Ohio (i.e. the only print copy would be in the depositories) or a full range of less than two print copies exist nationwide, then issue-level verification would proceed for that title.
